Created in 1967, Arbé is a 100% Caledonia company carrying out activity in the construction industry on three trades: Building, Civil Engineering (works of art and Maritime works) and deep foundations.

As a Leader in the field, Arbé relies on strong human expertise (24 engineers/technicians and 16 executives/employees in support services) and auxiliary staff of 150 people. The company possesses many work references and has carried out major works in New Caledonia (the SPC, the Lagoon Aquarium, the Ramada or Pacific Arcade Towers, 50% of the Médipôle hospital, a large part of the territory's bridges, and a deep involvement in all mining projects.

ARBE is constantly looking for innovative solutions and techniques. We are currently preparing for the implementation of a molded wall to achieve four levels of car parks buried under the water table. We are implementing the BIM (Building Information modeling) approach that will revolutionize construction projects in the coming years.

«Our teams are structured to meet strong expectations of international customers in terms of quality, like our mining customers, and in terms of autonomy, since they are accustomed to remote areas. We worked on the Ouvéa Jetty (18.5 million euros), and went on to maritime works on the Isle of Pines, soon to be followed by works in the country's south and at Lifou. Our teams know how to integrate local staff into field work; it is our commitment to train and integrate locally.»

These experiences and abilities have enhanced Arbé commitment to expand on other islands, such as Vanuatu and Wallis and Futuna. In summary, the strong technicality, the adaptability of the company and its permanent search for innovative and personalized solutions ideally place it on the expansion of projects abroad.
