Since 2012, Eloy Water New Caledonia offers New Caledonia all the expertise and technology in the treatment, reuse of wastewater (domestic and industrial) and rainwater recovery of Eloy Water, in operation since 1965 in the world. Field experience and the high degree of specialization of its teams guarantee to its customers sound advice and effective solutions on all kinds of projects through adapted «completed» solutions.

Mindful of the environmental need to manage water resource, Eloy water has a quality and sustainable development approach. The company has thus chosen to master each element of its solutions in wastewater treatment and reuse to ensure the long term perfect functioning. Sewage treatment plants, degreaser, hydrocarbon separator... All the products proposed are entirely designed and developed by engineers guaranteeing a know-how at the forefront of technology. The solutions are tested, controlled and approved to meet the requirements of users and those of non-collective sanitation system controllers.

Positioned as the leader on micro-purification plants for individual villas, the company has to its credit the vast majority of non-collective sanitation facilities carried out in New Caledonia. Thanks to regular and personalized monitoring, Eloy Water guarantees customers a local service and availability throughout New Caledonia. It works for both individuals and communities as part of larger projects.

With the project aim of producing rotomolding (plastic) vats, equipped with purification Eloy Water systems, the company would like to export these new products in the Pacific area.
