Email: ppp.gosse@lagoon.nc

Based in New Caledonia since 2002, the company 3P designs and produces PVC and composite profiles for the building and its environment. It has three product ranges:

-Panorama PVC panels for the creation of false ceilings, sub-forging, roofing, cladding for indoor and outdoor applications, residential, commercial or industrial sectors.

-PVC fence profiles (blades and poles) for the creation of all types of fences, gates, guardrails...

-Sundeck composite products (deck blade, wall baseboard) for the creation of deck-type floors, terrace, balcony, pontoon.

The PVC used is specially formulated for the pacific climate. It offers great UV resistance, is sturdy and easy to install. It is guaranteed without heavy metals (neither lead nor mercury), and benefits from the M1 fire classification (self extinguishing). It is 100% recyclable.

The production of quality materials is the priority of 3P in order to consolidate its current export markets (New Zealand, Vanuatu, Wallis and Futuna, Fiji).

The 3P products are thus manufactured under ISO 9001-2015 certification and meet the qualitative and environmental requirements of various international bodies: BRANZ certification (New Zealand/Australia); fire classification M1 of CREPIM (French laboratory accredited COFRAC); ENVOL certification (1st level of ISO 14001 standard); use of lead-free and heavy metal materials in accordance with the euro ROHS directive 2011/65/EU and REACH Regulation (EC 1907/2006).

As part of its export development, the 3P company wishes to consolidate its sales in the New Zealand market through its local partner, develop strong partnership in each State of Australia and increase further markets with other Pacific nations, including Papua-New-Guinea.
